- 

### **PROFESSIONAL EXPERIENCE**

#### **Corporate Project**

##### ◆ **POC -Beacon**

UWB beacons

Built-in Ultra Wide Band (UWB) radio

the beacons can now know the distance between each other with inch-perfect precision. we can have the actual coordinates for each beacons

Rider can track his/her live location within the facility.

Rider gets the data of parking zone and parking slot from the server. On the basis data we highlight the zone and later the parking slot and help the rider to navigate to the destination.

Once the rider reaches the assigned parking slot user notify the server by ending the trip. In this process he saves time and resource

We are tracking the parking of the motorbikes in the parking facility using the UWB devices. The driver has a moving UWB device connected to his android mobile device. Distance is calculated on the basis of time taken by the signal to travel from static device to the mobile device.

**Front End- Android.**

### Role- Developer

#### ◆ TML-Driver

Driver app helps the drivers and managers to load, deliver and return parcels while in field to customers using custom android os zebra hardware devices with inbuilt scanner.zebra sdk integration, EMDK(Enterprise Mobile Development Kit) calling APIs
